Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) **1-10**, drawn to halogenated or pseudohalogenated monomeric phenazinium compounds of a purity of at least 85 mole-%.

Group II, claim(s) **11-22**, drawn to a method of preparing the halogenated or pseudohalogenated monomeric phenazinium compounds.

Group III, claim(s) **23-26**, drawn to an acidic bath for electrolytically depositing a copper deposit.

Group IV, claim(s) **27**, drawn to a use of the bath.

Group V, claim(s) **28**, drawn to use of the bath.

Group VI, claim(s) **29**, drawn to use of the bath.

Group VII, claim(s) **30**, drawn to a method of electrolytically depositing a copper deposit onto a workpiece by which the workpiece and at least one anode are contacted with the bath.

The inventions listed as Groups I-VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The method of Group II can prepare a variety of different halogenated or pseudohalogenated monomeric phenazinium compounds as recited in Group I. Thus, preparing one compound is not necessarily preparing all of the others as claimed individually.

The method of preparing the halogenated or pseudohalogenated monomeric phenazinium compounds of Group II has nothing to do with the acidic bath for electrolytically depositing a copper deposit of Group III.

The method of preparing the halogenated or pseudohalogenated monomeric phenazinium compounds of Group II has nothing to do with the method of electrolytically depositing a copper deposit onto a workpiece of Group VII.

The acidic bath of Group III is not required to be used in the method of electrolytically depositing a copper deposit onto a workpiece as recited in Group VII. The acidic bath of Group III reads on an electroless plating bath.

Groups IV, V and VI provides for the use of the baths, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. Furthermore, depositing a mirror bright, leveled copper deposit for the purpose of producing decorative surfaces (Group IV), forming a copper deposit on a printed circuit board material (Group V) and forming a copper deposit on semiconductor substrate (Group VI) are different uses.

Applicant is advised that the reply to this requirement to be complete must

include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
